

ProSlide™ Telescoping

AUTOMATIC SLIDE DOOR SYSTEM

The ProSlide™ Telescoping door is the desired package when maximum opening is needed and space is limited.

SERIES 2003

Innovative Features and Economical Performance

The ProSlide™ Telescoping door package provides the solution for narrow passageways when a slide door entrance system is desired. The use of a telescoping door increases the clear opening of both a single slide and a bi-part package by more than 35 percent without increasing the overall size of the door frame.

This premium automatic sliding entrance system features the diagnostic microprocessor control and heavy-duty belt drive header system. The ProSlide's™ doors and panels feature premium corner block construction. The system is engineered to provide long life and safe operation with heavier doors.

Horton Automatics has the largest factory trained and certified distribution team in the industry to support the installation and servicing of your slide door entrance.
